Professional Highlights

I have 30+ years of experience in the software industry. I have worked as Project Lead, Business Analysis, System Design/Analysis, Software Engineer, Programmer/Analyst, DBA/System Programmer and as consultant for clients in the automotive, manufacturing, and marketing industries.

My Business Analysis and System Design/Analysis background consistently serves the clients well. My experience gives me the opportunity to assist clients to meet and exceed demands for applications, complimenting business models and strategies.

- **Software Engineer – *API Heat Transfer (Buffalo NY)* -** Designed, developed, and implemented applications in .Net environment. Created customized applications using ERP database to provide consolidated and useful information for business needs. Rewrite VB6 applications in VB.net and C#.net. Applied Object oriented programming concept, designed contemporary graphical user interface.

- **Systems Analyst/Programmer – *Ford Motor Company (Detroit, MI)* –** Developed and delivered in the areas of Mainframe, Siebel, Voice Response Host, Thick Client, and Legacy Applications. Developed both online and batch applications. Prepared reports using data warehousing and reporting tools. Designed DB2 and Oracle Store Procedures. Accomplished time-critical development projects that became integral components of the client's overall business models for core products.

- **Report Designer/ Data Analyst – *Ford Motor Company Business Assistance center (Detroit, MI)*–** Designed, developed, implemented, tested, and maintained complex operational and management reports. Analyzed, summarized, and extracted data to provide useful information and developed conclusions.

- **Programmer/Analyst – *Ford Motor Company (Detroit, MI)*-** Designed, developed, implemented, maintained, and supported online applications. Supported production requirements.

- **Lead Analyst/Network Engineer – *FORBES Computer Group* (Irvine, CA) –** Led teams of programmers /Analyst and Network Engineers. Designed, developed, tested, implemented, and maintained applications for major marketing companies with proprietary applications. Applications include Inventory Control, Service Warranty, and HR. Designed, configured, and administered a robust Novell Network, which supported more than 200 simultaneous users dispersed geographically and organizationally.

- **Education and Certifications**

  - Master of Science – Applied Sciences 1977,
    University of Karachi, Karachi, Pakistan
  - Senior Programmer Course – Certification JICA, Japan
    1985
  - Certified Novel Network Engineer – Novel, US 1990

Experience

API Heat Transfer **November 2008 to January 2024**

November 2008 to January 2024
Duration: 15 Years, 3 Months

Industry: Manufacturing – API Heat Transfer
Position: Software Engineer
Environment: .net and Legacy
Tools: VB.net, c#.net, ADO.net, VB6, Oracle, MS SQL, MS Access, XML, HTML, ASP.net, CSS, JavaScript, jQuery and SVN Repository

Designed, developed, implemented, and maintained engineering applications for shell and tube, plate, bar and plate, radiator heat exchangers, Applications performs designing, configuration, drawing, costing, bill of material, quotation, and specification. Applications interact with industry software for rating and mechanical design HTRI, BJAC, COMPRESS and for drawing Solid works and AutoCAD.

Designed, developed, implemented, and maintained Web based engineering applications for shell and tube, air- and water-cooled heat exchangers, Applications performs selecting models, configuration, display drawing, pricing and creates quotation.

Coordinates with offshore team in China, Germany, England, and India. Managing outsource projects.

Compuware Corporation **December 1993 to October 2008**

September 1998 to July 2008
Duration: 9 Years, 11 Months

Industry: Automotive – Ford Motor Company
Position: Systems Analyst/Programmer
Environment: IBM Mainframe, Thick Client, Legacy
Tools: IMS DB/DC, DB2, Teradata, DB2 Store Procedure, COBOL II, OS JCL, Xpediter, File-AID/MVS, QMF, XTAB SPUFI, TSO/ISPF, MS Window NT, 2000, Visual Basic 6.0, Oracle, UNIX, Conversant Script Builder, MS Access, EA Jacada, Siebel 2000 and 7.0, Ilumifi APF, Web Focus, VRU, HTML, ASP, .Net Web Service

Designed and developed a client-based front end for a Fleet Customer Information System using VB 6.0, Oracle, MS Access. Developed an interface with the provision of printing and e-mailing. Developed and implemented DB2 store procedures and Web Services to maintain data on host for Fleet Customer Information System. Designed and developed Interactive voice response (IVR) applications for marketing, vehicle inquiry and warranty assistance using Avaya Conversant Script Builder. Customize Siebel 2000 and 7.0 call center module according to the business need. Designed and developed Legacy applications using EA Jacada to support call centers Analysts. Designed and developed DB2 and Oracle store procedures to support call centers applications. Supported and written programs for CUDL/MORS III applications using COBOL, IMS, DB2, Teradata and ASP. Created daily, weekly, monthly, quarterly, and yearly complex reports for call centers, fleet scheduling, warranty, Preproduction/show cars and others using Ilumfi APF, Web Focus, XTAB and other reporting tools to meet needs of business users, including documentation of detailed design, programming, testing and implementation. Completed time-critical development projects that became integral components of the client's overall business models for core products.

Novi, Michigan
Mobile: 248-797-3585
https://www.linkedin.com/in/moaziz-jafri-92409515/

December 1993 to August 1998

Industry: Automotive – Ford Motor Company (Warranty Assistance Center) **Duration**: 4 Years, 9 Months
Position: Programmer/Analyst
Environment: IBM Main Frame
Tools: IMS DB/DC, DB2, COBOL II, OS JCL, Xpediter, File-AID/MVS, QMF SPUFI, TSO/ISPF

Supported Warranty operations. Coordinated with warranty customers and other customers to collect requirements for business need and provided information to perform their business efficiently. Developed Automated Claim Entry System (ACESII) including documentation of detailed design, programming, testing and implementation. Supported and created production operation strategy for warranty applications to provide smooth operation.

Forbes Computer Group **May 1990 to November 1993**

Industry: Marketing
Position: Lead Analyst/CNE
Environment: IBM Mainframe, Thick Client, Novell Network
Tools: CICS DB/DC BMS, DB2, COBOL II, OS JCL, Xpediter, File-AID/MVS, QMF SPUFI, ICCF, SDF, TSO/ISPF, FOXPRO, DBASE IV

Led a team of 10 Programmers/Analyst/Network Engineers and supported the company operations. Designed, developed, tested, implemented, and maintained applications for major marketing companies with proprietary applications. Applications include Inventory Control, Service Warranty, and HR. Configured, and administered a robust Novell Network that supported more than 200 simultaneous users dispersed geographically and organizationally.
