HEALTHCARE SENIOR LEADER – DATA ENABLED BUSINESS TRANSFORMATION

STRATEGIC TECHNOLOGY LEADERSHIP | DATA INTEGRATION & MODERNIZATION | PROCESS IMPROVEMENTS | BUSINESS DEVELOPMENT

I partner with executives to define and deliver industry specific insights and solutions to solve their most complex business challenges with Data and Analytics enabled products. I have demonstrated success in enterprise data management, analytics strategy, complex program execution, data modernization, strategic business analysis, infrastructure expansion and consolidation, and process improvement/optimization. Most recently, I manage an Enterprise Data & Analytics Division of 200+ individuals and $100 million spend budget within a Health Plan organization with a focus on accelerating the modernization efforts on the core data integration assets, and data delivery pipelines.

CORE COMPETENCIES

Strategic Planning • Digital Transformation • Enterprise Data Management • M&A Systems and Data Integration
Technology Strategy and Execution • Quality Risk Assessment • Stakeholder Engagement • Health Care Operations Leadership
Regulatory Compliance • Vendor Management • Analytics Enablement • Budget/Fiscal Oversight

PROFESSIONAL EXPERIENCE

HEALTH CARE SERVICE CORPORATION
BLUE CROSS BLUE SHIELD OF IL, TX, MT, NM, OK — Sep 2002 – Present

Divisional Vice President | Lead & direct all aspects of enterprise-wide technology solutions, process improvements & integration operations

Empower the organization to leverage enterprise data and analytics assets to create strategic value by resolving integration, regulatory and operational challenges. Experience with increasingly complex regulations & market forces, combined with technical expertise with new products and services in data analytics.

- Manage a business operations project portfolio of 200+ initiatives in the data integration, transformation and delivery space
- Lead the build of a member focused enterprise view of membership across all LOBs and all 5 member states
- Led multiple successful deployments of enterprise data initiatives that helped meet healthcare regulatory compliance requirements including the Affordable Care Act insurance exchanges, risk adjustment (3RS), Medicaid encounters and interoperability.
- Led the product build of CXO executive dashboards and data hub on Covid-19 related metrics.
- Implemented data governance framework and processes at multiple clients to establish trust and transparency on the collection, transformation, maintenance, and delivery of data assets.
- Served as enterprise architecture strategic adviser and led the systems assessment on the decommissioning of multiple legacy systems
- Led the design and build of the data foundational layer required to support a subscription-based healthcare delivery system - Fee for Value or Value Based Care
- Established and co-chaired the Women in Data program that continues to address the gender gap in the workspace while building allyship with senior leaders
- Creation of Medicare Command center to assist business leaders on what areas to target for Medicare expansion
- Led the re-design of HEDIS and STARS data submissions

Key Impacts:

- Personally, secured net new data & analytics operations budget while delivering $125M in business value across admin cost reduction & revenue retention levers.
- Assisted multiple business stakeholders in meeting regulatory requirements resulting in savings of ~$300M from financial penalties
- Built reusable code assets saving 90% effort in future developments and 40% improvement in processing time
- Lowered audit exposure and financial risks via application of audit, balancing and controls on financial data sets

Executive Director | Led the strategy and execution of $50 M in high-priority multi-year data & analytics programs

Responsible for leading over 150 employees to deliver innovative & re-usable data assets which promoted membership growth, improved customer & business user experience, reduced admin expense & medical loss

- Led the Consumption team to deliver data to strategic third-party vendors, such as Evicore to enable HCSC's Affordability of Care goal
- Led business-case process to fund and deliver five foundational assets to activate customer & provider centric analytics, enable AI/ML solutions, and develop streamlined data architecture that reduces operational cost

- Lead a multi-year Big Data delivery program transitioning the Enterprise Data repository to the Hadoop platform with $21 million budget.

- **Key Impacts:**
- Created and executed a multi-year modernization strategy in support of the financial reporting system. Reducing closing the financial books from 15 days down to 3.
- Lead a re-organization of identifying overlaps in job duties across multiple departments and consolidated into one team, which resulted in a cost savings of 7 million dollars for the enterprise.
- Partnered with HR to establish career pathing for Data and Analytics professionals in order to attract and retain talent.

Senior Director | Led data and analytics reporting strategy creating self-service reporting capabilities for the enterprise.

Responsible for enabling self-service data and analytics capabilities, establishing consistency in data reporting for executives.

- Collaborated across business and IT areas with a focus on design and construction efforts for the movement of the data from internal and external operational sources into the transactional and analytical data repositories
- Increased customer satisfaction with analytics by creating an integrated set of data marts enabling the cross-business processes to share data in support of advanced analytics, leveraging Tableau
- Managed unstructured healthcare data, i.e. prescription scripts, doctor's notes
- Enhanced and maintained the ETL (DataStage and Java) infrastructure and partnered with the architecture team in support of a data integration hub for the delivery of governed information to the downstream analytic and transaction consumers
- Led Affordable Care Act (ACA) technical implementation to position as a dominate player in the marketplace

. **Key Impacts:**

- Selected and implemented a key vendor partner to establish modern approach to self-service reporting resulting in a reduction of report availability. In-addition, reduce the dependency on IT.
- Cost savings from switching vendors resulting in an annual savings of 23 million dollars
- Reducing the dependency on IT allow executives to obtain business insights faster and increased accuracy

Senior Manager | Led real-time data integration supporting the enterprise direction for reducing data latency for mobile applications

Responsible for the Operational Data Store

- Implemented the ODS program, a near real-time integration of multiple operational data sources
- Managed and led the implementation of Enterprise Data Repositories (ODS, EDW, MDM, and IDM) to support data movement and governance processes
- Developed the quality assurance program to ensure operational data is a trusted source of information
- Managed the ETL Toolkit suite, which includes, Data Stage, Quality Stage, Information Analyzer, Fast Track, and Change Data Capture
- Establish Master Data Management platform as well as data governance for multiple enrollment systems.
- Build out subject areas within the Enterprise Data Warehouse

. **Key Impacts:**

- External customers and Providers have the capability to verify benefits real-time
- Members were able to verify claims history without a 30-day lag time
- Care Management team was able to connect government, retail, and commercial members into a single view by utilizing Master Data and have complete view of a member's profile

Senior Developer | Financial IT developer enabling financial reporting for the enterprise

Responsible for Creation & Management of ETL Operations for Financial Systems

- Created batch programs to move operational data from HCSC and subsidiaries to a financial database
- Performed data mapping from source systems to the financial data base
- Supply financial data to the Enterprise Data Warehouse

. **Key Impacts:**

- Partner with the financial business partners to gather business requirements, and translate into field-level technical requirements – including complex financial business rules
- Capture inputs from multiple source-systems and led design of integrated construct to reduce admin expense of system maintenance
- Provide continuous "lights-on" support of ETL operations to ensure financial processes met SLAs and met delivery commitments

CARIBOU HEALTH SYSTEMS, *Medinah, IL* — Mar 2002 – Sep 2002

Lead Systems Analyst | Support claims adjudication teams within Blue Cross Blue Shield of MN

- Created COBOL code to assist the team on the implementation of an automated business rules engine within BCBS MN claims payment system
- Gathered, implemented, and tested business requirements in additional to creating system documentation

Key Impacts:

- Increased claims adjudication throughput by 35% via automation of business rule application & data quality controls

EXPERIAN, *Schaumburg, IL* — Apr 2001 – Mar 2002

Lead Database System Analyst | Customer-Centric Data Modeling & DB Design

Provided support of mailing lists and marketing material to high performing consumers

- Led a team of three database analysts to design relational data models conducive to 360 customer analysis
- Physically implemented data models in relational databases using the STAR design
- Designed and built custom applications on-top of databases to automate customer outreach and targeting

Key Impacts:

- Integrated consumer and retail data to produce 27 net-new KPI's and metrics for use by the customer & marketing team to create targeted campaigns
- Reduced turn-around-time to stand-up new marketing campaigns by 50% through implementation 360 customer model and automation of customer outreach & targeting

HEALTH MANAGEMENT SYSTEMS, *Itasca, IL* — Jan 1998 – Apr 2002

Lead Database System Analyst | Managed Implementation of Data Products for Health Providers

Provided overall system support within claims and provider systems for major health providers

- Created mainframe programs using COBOL, CICS, JCL, and DB2
- Implemented Y2K changes for a large health insurance company

Key Impacts:

- Modified systems for customer enhancements
- On-site support for systems during Y2K

TOOLS & FRAMEWORKS

- Azure SQL (SSIS, -RS, -AS)
- Azure, Databricks, GC
- IBM Watson KC, RDM MDM
- Tableau, Power BI, Alteryx
- PPM: CA Clarity, Tasktop
- Product Management
- Scenario Analysis, Real Options
- Atlassian, Jira, Caliber
- BI: IBM Cognos/SPSS/ICM
- Python, SAS, R, Hadoop, Spark
- Solution Development
- SAP BW / Oracle DW
- IBM Watson KC, RDM MDM
- AI, ML, & RPA Platforms
